Deleting and Moving Apps

When parents enabled Restrictions, also known as parental controls, one of the Restrictions chosen may have been to disable the ‘Deleting Apps’ option. This is a good idea, as until children are familiar with moving Apps around they could accidently delete an App.

Deleting Apps is simple however you may need to disable the Restriction first to allow you to use this feature. Remember to enable the Restriction again when you are finished cleaning up and deleting excess Apps with your child.

How To Allow the ‘Deleting Apps’ in Restrictions.

1. Tap Settings Icon > Select General.

2. Tap Restrictions

3. Enter your 4-digit Restrictions pass-code.
4. Tap **Deleting Apps** to enable the deletion of Apps.

5. Go back out of the settings area now and follow the simple steps below to remove unnecessary Apps.

---

**Tip 13**

**Move and delete apps**

**IT IS EASY** to move the icons around on your iPad and delete apps that you no longer use.

Hold your finger on one of the apps for a couple of seconds and all the icons will begin shaking. You can now drag them around to rearrange. To move an app to a separate screen, drag to the edge of the display and wait a few seconds until it moves across.

The little ✗ icon on the corner of downloaded apps allows you to delete them and free up space for new ones. These can always be reinstalled from the **App Store**.
